Self-Evaluation (Individual contribution)

For this project, I contributed primarily by working on the technical report and assisting with the final presentation. Here's a breakdown of my involvement:

1. Technical Report:
    ○ I was responsible for drafting and organizing the technical report. This involved clearly articulating the problem statement, objectives, technical details, and progress made throughout the project.
    ○ I ensured that the report covered all key areas, including the challenges faced, the solutions implemented, and the next steps for the project. This helped in providing a comprehensive view of our work, making it accessible to both technical and non-technical team members.
    ○ I took the initiative to break down complex technical concepts, such as the machine learning model used and the triangle architecture, to ensure clarity and cohesion in the report.
2. Presentation:
    ○ I assisted with the preparation of the final presentation, helping to translate the technical details from the report into a visually engaging format.
    ○ I contributed to the design of the slides, ensuring that the content was concise and aligned with the report, and practiced delivery with the team to ensure a smooth flow during the presentation.

Overall, I made sure my contributions to the report and presentation were well-aligned with the goals of the project, focusing on clear communication of our technical achievements. This experience has strengthened my ability to organize and present technical information effectively, and I look forward to applying these skills in future projects.
